## Correlation between screen time and mental health in different countries

Social media is an ever-changing landscape of connections that is a constant aspect of everyday life, needing to be kept up to date and further analyzed for any type of repercussions. It has been engraved into our brains as a platform that allows us to create, connect, and inspire everyone together. While a lot of people may view social media as an amazing thing, there are surely a tremendous amount of effects that social media brings upon society.
